

Valve Operating Equipment

T-T Flow[®]
Valves

A range of manual, mechanically assisted and powered valve operating equipment developed for remote operation of a wide selection of valves. These items are engineered to suit both multi and quarter turn valves and those with either rising or non-rising spindle configurations.

1. Handwheel operated floor pedestal with optional position indication (not shown)
2. Bevel (as shown) or spur gearbox operated floor pedestal
3. Actuator mounted on floor pedestal
4. Handwheel operated extension spindle
5. Operating T-key with female square taper socket
6. Surface box
7. Extension spindle with upper male square taper drive
8. Adjustable outreach support bracket
9. Offset drive; spindle with universal joint
10. Straight spindle
11. Female square taper socket. Alternative spindle terminations are available on request
12. Male square taper drive on valve

Muff couplings are offered on longer lengths.
